

# PRAVEENKUMAR R

## ASPIRING DATA ANALYST / DATA SCIENTIST

Chennai, Tamil Nadu, India | +91-7094886514 | praveenkumar220205@gmail.com | LinkedIn | GitHub | Portfolio

### Professional Summary

Statistics graduate with one year of hands-on experience as a Data Analyst, translating business problems into structured analysis defining problem statements, analyzing processes and datasets, and delivering clear, stakeholder-ready documentation and dashboards. Built and deployed machine learning and SQL-based analytics projects, including a churn prediction model (88% accuracy) and an NLP classifier deployed as a live Streamlit app. Combines analytical rigor (hypothesis testing, regression, EDA) with practical tools (Python, SQL, Power BI, Excel) to support real-time data sourcing, cleansing, dashboard creation, and accurate, timely reporting. Now looking to grow into a broader Data Analyst / Business Analyst role with greater ownership of end-to-end reporting and stakeholder decision-making.

### Key Skills

- **Data Handling & Reporting:** Data sourcing, cleansing, validation; structured MIS reporting (daily/weekly/monthly); KPI tracking
- **BI & Data Modeling:** Power BI (DAX, Power Query, data modeling), Excel (VLOOKUP, XLOOKUP, Pivot Tables, Slicers, advanced formulas), Matplotlib, Seaborn
- **Databases & SQL:** Oracle SQL, MySQL — query optimization, joins, window functions, CTEs
- **Analysis & Documentation:** Problem definition, process/workflow analysis, structured reporting, stakeholder-ready documentation, root-cause analysis
- **Programming & ML:** Python, Pandas, NumPy, Scikit-learn, NLP (TF-IDF), Statistical Modelling
- **Statistics:** Hypothesis Testing, Regression Analysis, EDA, Feature Engineering, A/B Testing fundamentals
- **Tools & Deployment:** Git, GitHub, Streamlit, Jupyter Notebook
- **Communication:** Fluent verbal and written English; experience presenting analysis and dashboards to non-technical stakeholders

### Professional Experience

#### Data Analyst

Jul 2025 - Present

*Nessvora Technologies* | Chennai, Tamil Nadu

- Worked as a Data Analyst on a real-time e-commerce project, gathering business requirements and translating them into structured, stakeholder-ready analysis.
- Built interactive Power BI dashboards to track sales, revenue, and operational KPIs, enabling stakeholders to self-serve insights from live data.
- Wrote and optimized SQL queries to extract, clean, and structure data from real-time e-commerce datasets to answer specific business questions.
- Delivered structured reports in Excel and Power BI (daily/weekly/monthly), translating technical data into a business-readable format for non-technical stakeholders.
- Performed data sourcing, cleansing, and validation to ensure accuracy and reliability of reporting on real-time data feeds.

### Projects

#### Fake Job Detection System *Machine Learning & NLP*

- Defined the problem statement and success criteria before building an NLP pipeline (TF-IDF + Logistic Regression) to classify job postings as real or fraudulent, achieving 85% accuracy on held-out test data.
- Deployed the model as a live, interactive Streamlit web app with a simple, non-technical user interface — designed for end users to test postings instantly without needing to understand the underlying model.
- Documented preprocessing decisions (stopword removal, lemmatisation, class-imbalance handling) so the reasoning and workflow are traceable for future users.

#### Customer Churn Prediction *Machine Learning*

- Analyzed 7,000+ telecom customer records to identify the business drivers of churn, translating raw data patterns into plain-language findings for a non-technical audience.

- Built and compared Logistic Regression, Decision Tree, and Random Forest classifiers, reaching 88% accuracy with a tuned Random Forest.
- Published a fully documented analysis notebook on GitHub, including the reasoning behind each modeling decision — written to be understandable by reviewers outside the project.

#### **SQL-Based HR Attrition Analysis**    *Oracle SQL*

- Investigated attrition patterns across a 1,470-record HR database to surface actionable, business-relevant insights by department, age group, and salary band.
- Wrote 20+ SQL queries (JOINS, GROUP BY, window functions, CTEs) to extract and structure the data needed to answer specific business questions, cutting manual analysis time by 40%.
- Delivered structured KPI summary reports in Excel, translating technical SQL output into a business-readable format for stakeholder review — core requirements-to-insight translation.

#### **Adidas Sales Dashboard**    *Power BI & Excel*

- Gathered the reporting needs behind the dashboard (which metrics mattered, to whom) before designing an interactive Power BI and Excel dashboard covering 9,600+ sales records across regions.
- Surfaced revenue, profit, and product-trend insights; identified the top-performing region driving 34% of total revenue.
- Enabled dynamic filtering for stakeholders, cutting manual reporting time by 50% — built specifically so non-technical users could self-serve answers.

## **Education**

---

### **Bachelor of Science in Statistics**

Arignar Anna Arts College, Villupuram | CGPA: 7.2

Oct 2022 – May 2025

## **Certifications**

---

- Business Analysis Foundations — LinkedIn Learning
- Tech Career Skills in Data Analytics — LinkedIn Learning
- Artificial Intelligence for Business — LinkedIn Learning
- Typewriting Senior (GTE) — Zion Institute
