CAREER OBJECTIVE

Statistics graduate with hands-on experience building and deploying machine learning and SQL-based analytics projects, including a churn prediction model (88% accuracy) and an NLP classifier deployed as a live Streamlit app. Strong foundation in hypothesis testing, regression, and experimental design, paired with practical skills in Python, SQL, and Power BI. Seeking an entry-level Data Analyst or Data Scientist role to apply statistical rigor and analytical storytelling to real business problems.

TECHNICAL SKILLS

Programming & ML: Python, SQL, Pandas, NumPy, Scikit-learn, NLP (TF-IDF), Statistical Modelling

Visualisation & BI: Power BI, Tableau, Excel (Pivot Tables, Slicers), Matplotlib, Seaborn

Statistics: Hypothesis Testing, Regression Analysis, EDA, Feature Engineering, A/B Testing fundamentals

Tools & Deployment: Git, GitHub, Streamlit, Jupyter Notebook, Oracle SQL

PROJECTS

Fake Job Detection System (Machine Learning & NLP)

[GitHub ↗](#)

- Built an NLP pipeline using TF-IDF vectorisation and Logistic Regression to classify job postings as real or fraudulent, achieving 85% accuracy on held-out test data.
- Deployed the model as a live, interactive Streamlit web app for real-time prediction, allowing non-technical users to test postings instantly.
- Handled class imbalance and text preprocessing (stopword removal, lemmatisation) to improve precision on the minority fraud class.

Customer Churn Prediction (Machine Learning)

- Built and compared Logistic Regression, Decision Tree, and Random Forest classifiers on 7,000+ telecom customer records, reaching 88% accuracy with a tuned Random Forest.
- Conducted EDA and hypothesis-driven feature engineering using Pandas, Seaborn, and Matplotlib to identify the strongest churn predictors.
- Applied hyperparameter tuning (GridSearchCV) and cross-validation to reduce overfitting; published full analysis notebook with documented reasoning on GitHub.

SQL-Based HR Attrition Analysis (Oracle SQL)

- Wrote 20+ SQL queries (JOINS, GROUP BY, window functions, CTEs) against a 1,470-record HR database to surface attrition patterns.
- Identified key attrition drivers by department, age group, and salary band, cutting manual analysis time by 40%.
- Delivered structured KPI summary reports to Excel for stakeholder review, translating SQL output into business-readable insights.

Adidas Sales Dashboard (Power BI & Excel)

- Designed an interactive Power BI and Excel dashboard with pivot tables and slicers covering 9,600+ sales records across regions.
- Surfaced revenue, profit, and product-trend insights; identified the top-performing region driving 34% of total revenue.
- Enabled dynamic filtering for stakeholders, cutting manual reporting time by 50%.

EDUCATION

Bachelor of Science in Statistics

Oct 2022 – May 2025

Arignar Anna Arts College, Villupuram | CGPA: 7.2
